NO DXCC CHANGE FOR BAKER/HOWLAND: although ARRL's DX Advisory Committee voted 9-7 to recommend new country status for Baker/Howland (see IDXB 239), the ARRL Awards Committee (headquarters staff) overruled the recommendation 6-1. Sole jurisdiction of the old American Phoenix Islands has been under Kiribati since Sep 23, 1983, so that island group is no longer part of the Baker/Howland listing, which remains on the DXCC list. Thus, no deletion or addition to the List is made.

FCC PROPOSES SWIPING HALF OF 160 METERS: on Sep 11, FCC released Docket 84-874, proposing to "reallocate" 1900-2000 KHZ to non-government radiolocation, "because of an anticipated expansion of the AM Broadcast Band that would force certain radiolocation stations to move." ARRL was taken by surprise on this one, and they planned an immediate response, calling the case "the bureaucratic equivalent of a soap opera."

NO CHANGES in the operating patterns of CE0AA, XU1SS, or the various BY stations. CE0AA pileups dwindle, although it is still possible to get on a list one day and not work them until the next; they are very active on 15 CW. 20 Meter conditions are making the Sunday morning XU1SS sked (see Calendar) more and more successful to North America. BY4AA was the most-heard Chinese station last week, with a good signal but poor operating; one time, DU9RG became frustrated by jammers and sent the YL BY4AA operator off on her own, even though she worked split she was unable to pull a single callsign out of the pileup.

An F0IRK/I appeared on 40 CW Sep 19, claiming to be on Tromelin, but we are doubtful. Perhaps one of our French readers can advise just what that "/I" might stand for.

STEVE GECEWICZ, K0CS, along with W8TH and WB0UXI, will operate single-band 80 Meters in the CQ WW Phone Contest at the end of October, from Macao (CQ Zone 24). They have confirmation, according to the Kansas City DX Club Newsletter, that the license awaits them. While K0CS works 80, W8TH will be doing his own single-band effort on either 20 or 40, and the three will be on other bands immediately before and after the Contest.

S COOKS operation Oct 23-Nov 4, ZK1XC and ZK1XD, by PA3BFM and PA3DHH, will feature 160 Meters. PA3DHH is said to be an experienced Top Band man, and will be on the other bands, too. No indication that they will work the CQ 'Phone weekend, tho.

S YEMEN POSSIBILITIES, according to Hol-land's DX Press: "There is a good chance that OE6EEG will join a native in 70 for an operation at the end of the year. However, you must understand that getting permission for 70 is very difficult and everything must be handled with care. Actually, everything is sure (only) when you are in the country. For that reason, OE6EEG will make his announcement when everything is 100 percent sure, and not months in advance."

WAKE ISLAND's Tom, AH3AA/KH9 and Dave, AH9AB, currently have no power to their "main station," and are operating from their living quarters with wire antennas, according to DX News Sheet. They want to make special efforts to work into Europe during the Fall. AH9AB may be leaving soon but AH3AA/KH9 will be there until Jul 85.

BRIEF NOTES. two new rules by CQ's Contest Committee (team competition and heavier penalty for dupes) drawing much fire from the contest community...no further votes on Pribilofs DXCC status expected from DXAC... P29JS writes that his new beam should be up by now; he's back on P29JS for a year and will run his 14.220 net again...be sure to see the ad in October magazines for AEA's "DOCTOR DX" computer program, an "operating simulator." We think there are some sacred things you just don't simulate. For example, oh, never mind...USSR Tidbits says UK1PG0 on Franz Josef Land is now RZ10WA, and claims there's no way now to tell if someone in the UA10-0Z10 block is on FJL...

PLEASE SEE NOTE ON PAGE THREE, AND get reports in to IDXB by Tuesdays! TNX.

YES, another installment of

NOSTALGIA CORNER!

WE HAVE BEEN very skillful, or very lucky, at predicting band conditions the past five years. As mentioned before, your editor was involved in a cross-country move eleven years ago so our log is empty from June '73 until the spring of 1974. We are grateful to those of you who responded to our plea for your log info from just one sunspot cycle ago.

Our predictions for this fall and winter won't come as much of a surprise: 10 Meters has fallen apart and only the transequatorial paths will be reliable, ie, North to South America, Europe to the Middle East and North Africa, Japan to the Pacific. Fifteen Meters will still provide long-haul paths, but averaging only a couple of days a week. Twenty will be the mainstay band, with much greater potential for U.S. amateurs, due to the expanded 'phone range. The morning openings will be both stronger and more often than the evening ones (on 20). The Low Bands, if last winter was any indication, will be better than ever before, as worldwide knowledge of "Gray-Line" propagation sinks in.

Now, for some of your comments about the 1973-1974 operating season:

"I am really amazed looking back to 1973-'74. It's going to be a real let down after the past couple years." - K7LAY Bob's Washington state log was mostly 15 and 20 Meters and included AC3PT (Sikkim's king), VR6TC on 15, and a lot of "tests" and CQ's!

Florida is, arguably, the best place in North America for HF DXing, sunspots or no. K9BG logged some goodies from there eleven years ago, including such famous calls as ZD3X, KS6ER, XV5AC (40 Meters), W9YYG/HKØ, CR5AJ, 5T5CJ, ZD8TM, and SMØAGD/HKØ. Except for XV5AC, these were on 80 Meters. Jerry's log, from the summer of '73 to April '74 led him to conclude "looks like 10 Meters was shut down except for N-S path and not too much on 15 except Africa and S.A, after mid-March '74. I remember NO Europe on 15 for a period of 2-3 years right after this time frame."

Let's head for the mountains and some calls from W7LR's Log (Montana, not your best DXing spot)...Bob didn't specify a band but we bet these, Jul-Dec 1973, were 20 Meters or lower: 5X5NK, A2CCY, CR5AJ, CR6AL, CR7IZ, ET3USE, CN8CG, TU2EB, and EL2DS.

Get out your Drool Cloth for these next ones, from WB9HAD, who says he's "only been active during the lower portions of the Sunspot Cycle. Great timing." All these from Illinois on 20 Meters, with 4-elements at 70 feet: KC6ES, JD1YAH, XU1AA, VQ9BP, YA1AH, scores of VUs, Asiatic USSR, and Europe, VK9FH, XV5AC, 5R8AC, MP4BJP, ET3USC, CR6AD, 3V8DM, PYØAO, TY1UW, EP2DO, and ZS2MI.

ON JUNE 20, 1973, Don Wallace, W6AM, operated from SVØWTT (now SVØAA, "Jack" Jackson). On 20 CW from Greece that summer day, Don said it all: "This was simply the greatest possible ham day. I worked 206 contacts in 32 countries, including all ten U.S. districts and 17 W6. It sure was great." Don went back for another stint Jun 26 and logged another 25 W6s, again all on 20 CW. Best times were 0300 to 0500Z for the U.S. West Coast.

10 Meter fanatics know that October will be the month this year that produces... W4BAA's log (Florida) shows a few Africans, namely TU2EF, ET3USE, and 9J2WR on 10 eleven years ago. Sadly, nothing on 10 for DeWitt after Oct, but he did pick up many Africans on 15 during that winter. In January 1974, W4BAA's log suddenly runs out of 15 Meters, however, with 20 becoming the sole DXing band...a few you might like to have recorded were EP2WB, FL8BH, EP2YL, CR3AH, HS4AGN, 4W1GM, CR7RM, and VQ9R. These were all Garden Variety back then!

W9DH's Illinois log shows much the same pattern as W4BAA's Florida book...scattered 15 Meter Africans through the autumn, then down to 20 for the winter. Of course, from W9 Land, Loren was also working West on 15, into the Pacific. His 15 Meter times also remind us that with declining sunspots, the band often opens late, after the hours of light have had time to "warm up" the band; instead of Africans breaking through at sun up on the West end of the path, they instead appear at sundown in Africa. Same thing, to a lesser extent, on 20.

KE9A sent a copy of friend W9NVJ's Illinois log, starting with his country #300 in July '73 (KB6CU); Slugging it out on 20 Meters, W9NVJ chalked up #301, SU1IM, 302, CR8AM (Portuguese Timor, deleted now), and 303, ZK2BD, before Fall. Hey, here are some JAs, on 15, September 31, but only a few, reports 559 and 569. And what's this? An African opening on 10, Oct 27, featuring five hours' worth. But that's it for 10 Meter entries until CR6JO (559) on 10 Meters, Mar 14, 1974. Much 15 Meters into Africa and Europe in between, though.

What's all this mean? Well, changing conditions due to Sunspots are absolutely predictable. Although better stations can make a difference on the Low Bands, and on 20 Meters at "the bottom of the cycle," nothing can be done about 10 Meters in particular and, to a lesser extent, about 15. Only humungous amounts of RF power can overcome a weak ionosphere.

Re-read this page, make your plans accordingly, and you can't go wrong. We guarantee it!
