224	155	201	130	104	6/20	70	9	3

\*T31AT has been on from Central Kiribati and may run through the end of June; he likes 20 Meters and is concentrating on working Europe. QSL to G4GED.

\*VR6JR has been a regular on 14.180 after 0300Z and elsewhere on 20 SSB. He expects to be on Pitcairn for 4-5 months. QSL to G3OKQ.

\*KB2HZ/PJ7 will activate St. Maarten Jul 5-12 on all bands.

\*On a related note, Aruba is in the process of becoming politically independent from Holland. This may be finalized sometime this year, and new DXCC country status would be likely at that time. Word is that licensing for the Island will remain in the hands of officials on Curacao, at least in the beginning.

\*An appearance by VU2HMD/VU7 Andamans has been reported in the European press but was not authorized; word is that although two licensed hams are currently on the Andamans, no operation is allowed. Indian amateurs are still hopeful that they will be able to get permission for an operation similar to that from the Laccadives in early 1984.

\*3A2TO QSLs have been received from EA5AGY but are reportedly not good, as such a callsign has not been issued.

## A NOTE ABOUT YOUR SURVEY SHEET

PLEASE read the instructions and fill out the sheet completely before you return it. Fill in your callsign, check off your geographic area, and fill in the circle with the number of countries which you checked off. Thank you.

\*News and views from a highly-placed source in Africa...the operator of C90A in Maputo, Mozambique, is using a callsign he made up himself, and there appears little chance of him or anyone else getting a written license. Swedish operators using their home calls /C9 are getting lots of U.S. dollar bills from hams around the world but their QSLs don't count, either.

A shakeup in the licensing authority in the Ivory Coast has resulted in visitors such as K1CTK operating portable. Things are expected to stabilize soon and more TU callsigns will be issued.

From Niger, another source says his continued appeals for a license are still being denied. He says the government is even more reluctant to open any doors following an incident at a remote desert outpost, where a group of 14 "Libyan-trained dissidents" killed two policemen. Our source's assessment of the situation also mentions the continually deteriorating conditions in that part of Africa, with the drought which has lasted several years taking its toll on already shaky governments.

Former W1AW operator W1EH spent the past two years in Pakistan, where only citizens are allowed amateur licenses. Chris is on his way to S. Africa, and hopes to join other Americans in the area for DXpeditions. Incidentally, the reciprocal licensing agreement between S. Africa and the U.S. may have been signed by both parties by this time.

\*DXPress reports that XZ2HN has been heard in Europe, the operator being OK2BKH. He's stationed in Rangoon. If that call sounds familiar, it's because it has been assigned for many years to a resident, whose Callbook mailing address is in care of the Defense Ministry.

As we have mentioned before, IARU still has word that amateur radio is officially banned in Burma, so something will have to have drastically changed for an operation like this to count for DXCC. The British press reports rumors that OK2BKH has "written permission." They suggest 14.220 at 1300Z for Europe, which would also be an optimum time for North America.

\*DXPress also reports rumors that 3C0AB and 3C0AM could be on from Annobon in July.

\*It is now clear why pirate "OH2BH/ZA" appeared on June 11; the June 11 issue of the RSGB DX NEWS Sheet mentioned that Martti is "hopeful that the new regime in Albania will be sympathetic to his forthcoming application for a license."

## UP AGAINST THE WALL

by DAN ROBBINS, KL7Y\*

A number of factors influence what countries you still need at any point in your DX quest. First, there the long-recognized factors: station capability, presence of operators in the other country and operating ability of same, and the number of hops from you to the other country (a topic discussed at length in TDXB last fall -ed).

An additional factor to be considered here is "the wall," made up of populated countries between you and the one needed. When those in-between countries have a large amateur population, they can establish a barrier or wall between you and the desired DX. Some examples will illustrate the problem.

Remember when Malpelo was on the air (October '83-ed), and nobody in Alaska worked them? Certainly they were weak, but there were times when they were copiable. However, there was a solid wall of stateside stations between us and the coveted Malpelo, and the USA barrier was just too large to overcome.

Although there were stations in there calling for a new country, probably many of the loudest signals in the wall didn't really need HK0 for a new one. Even if we eliminate those clowns it is probably not wrong to say that every W4 or W5 with a dipole was an "S" unit louder than the best KL7 station. That wall was built with some very big bricks.

Of course, we hit the wall in other directions, too. Ever try to work a juicy one while beaming west? The JA's may be the most polite operators in the world, but what they lack in rudeness they make up for in sheer numbers. And every one of those stations is either calling the same DX you want or, worse yet, calling you.

But I saved the worst for last. If there is a wall that is most impenetrable, it has to be beaming north. The Europeans form a literal blockade to the rare ones of Africa and the Middle East. Even the surliest W6 pileup will eventually calm down to let you finish your QSO with that rare PY0 or ZD, but beaming through Europe will not yield the same results. Try to poke through the wall of Europeans and they poke back!

To fully appreciate the problem, look at the countries you need. More than likely, most of them will lie on the other side of the wall, whatever the wall is for you. From Alaska, those Africans which you never seem to hear lie just on the other side of that wall of Europeans. Those rare deep Asians hide behind the skirts of a half million JA's. Even that stuff in the South Atlantic is tough with a solid barrier of W's in the way.

As with any barrier, there are methods of circumventing the obstruction. First, consider avoiding the wall by going around it; a long path opening

to Africa, for example, eliminates the European wall, and leaves you competing only with some of the Pacific Islands. Skewed paths are harder to find but also may be a way around the wall.

Going over the top of the wall is another way to get those rare ones in the log. When the skip lengthens, a period might exist when the stations comprising the wall no longer have propagation. As an example, when the last Peter and Paul Rocks DXpedition was active, there was a period of about 15 minutes when they were workable on 15 Meters, as the USA had lost propagation, and yet the band was still open here. I remember some of the best African openings coming when the skip to Europe was poor.

Another way to go over the wall is to work the low bands during summer in the Northern Hemisphere; most of the statesiders have high static levels, and we can work stations in the Southern Hemisphere right through them.

Finally, although it is possible to try to blast through the wall with sheer power, a better way is to try to slip through a crack in the wall. There will always be a chance to drop your call in at an opportune moment, or perhaps a little off frequency and in the clear.

\*(Editor's Note: this article appeared in longer form in the April issue of The Alaska Goldpanner, a monthly publication by the officers and membership of the Alaska DX Association; KL7Y is vice president of the ADXA).

## Five years ago in The DX Bulletin

(June 30, 1980): G3JKL/5A was on working from Libya, but he never did count for DXCC. ZL1BCG made an unannounced appearance as FW0DD, Wallis. W6OML was rumored headed for the U.A.E, and VE1AI was

likely to activate Sable Island with a VY1 call. DK9KD sent a long report on his operations from Glorioso, FR0ACB and FR0ACC. One of the German operators on that expedition was Gero Band, DJ3NG, who was

killed by Vietnamese during the ill-fated attempt to activate Spratly in April, 1983.

## SYRIA - 35 YEARS OF AMATEUR RADIO

by JIM SMITH, P29JS

For the serious DXer there are a number of key DXCC QSOs which must be made. I suppose all new countries are key contacts, but what I mean is a country having only one or two active operators. The sort of DXCC country I have in mind is Lord Howe (VK2AGT/VK9LH), Pitcairn Island (VR6TC), Malawi (7Q7LW), Nepal (9N1MM) and Syria (YK1AA).

There are many other countries with just one or two operators "holding the fort" - every DXer needs the QSO. The demand is continuous, with no escape. Now, with the U.N. peacekeeping force in the Golan Heights, the demand for Syria is more spread out, but it doesn't seem all that long ago that in order to work Syria, you worked YK1AA.

In my 37 years of DXing I have touched base with Rasheed Jalal many times, and I have heard some enormous pileups on YK1AA. Rasheed has always had a good set-up, and in the early days of 2-way SSB he was always there. Rasheed has always been a good QSLer, too. As far as I can remember, he has always used the same QSL. As a result, when you see photographs of DXers QSL cards, invariably that distinctive YK1AA card will be there.

The average amateur often takes stations such as YK1AA for granted, until they leave the air for one reason or another. Rasheed has had these periods of inactivity but for the past 35 years he has provided many amateurs around the world with their one and only contact with Syria.
